

# City of Deerfield Beach

## Public Street Resurfacing Project

December 10, 2012

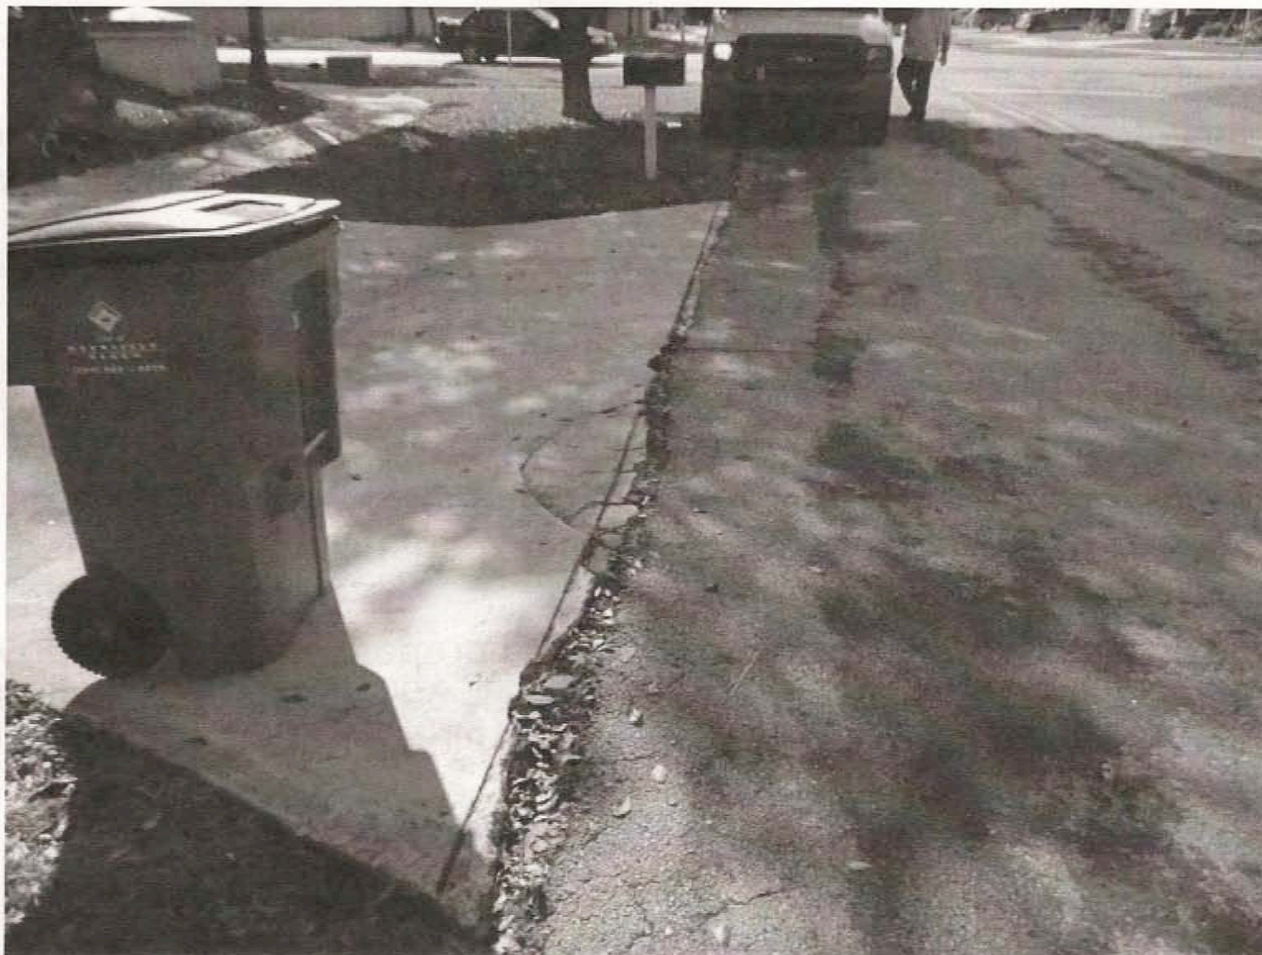

## Properly Constructed Driveway

## Improperly Constructed Driveway

## Improperly Constructed Driveway With Cracks

## What To Expect?

- City Commission approved, and was granted a \$7.5 million dollar bond for public street resurfacing.
- Phase 1 includes all public streets bounded by The Florida Turnpike in the West, Powerline Road on the East, Hillsboro Blvd on the south, and the Hillsboro Canal on the North.
- This includes approximately 20 miles of lane resurfacing.
- Project is expected to take 2 months to complete.
- The following letter is being sent to all residents in the affected area. This includes residents on private streets that will be directly affected by this project.
- Be assured that paving and construction techniques used by the City in the past will not be repeated. I have over 30 years of experience directly related to pavement design and construction.
- Describe existing driveway conditions. (Show a properly constructed driveway, an improperly constructed driveway (approximately 30% of existing driveways are constructed this way) and a cracked driveway). Please note that existing cracks will not be repaired.

## What To Expect?

- Many mailboxes do not meet code. Mailboxes that extend over the edge of road will impede progress and slow down production.

### What to expect?

- Signs will be appropriately located to designate "Street Resurfacing is in Progress".
- On Thursday, 12/13/12 milling operations will commence. 18 inches along the edge of each road lane will be milled down about  $\frac{3}{4}$  of an inch. In some cases this will include the edge of the concrete driveway in order to correct the deficiencies previously identified.
- Prior to laying asphalt, grass at the edge of road will be edged wherever necessary.
- On 12/19/12 we will commence the installation of 1 inch of asphalt on all streets being resurfaced.
- Construction Equipment will be stored at the Villages of Hillsboro Park.
